A screenshot of an Xshell terminal window. The window title is "1 华师大...login01". The terminal output shows the Xshell version (5, Build 1015), copyright (2002-2016 NetSarang), and a prompt to type 'help'. It then shows a connection to 59.78.197.11730. After connection, a warning message states that the remote SSH server rejected X11 forwarding and that the user's password has expired, requiring an immediate change. The terminal then prompts for the current UNIX password, followed by "New password:" and "Retype new password:". A red rectangle highlights these two prompts, and a red arrow points to them from the right. After the password change, it says "passwd: all authentication tokens updated successfully." and "Connection closed by foreign host." It then shows the user disconnected from the host at 18:59:37. The terminal returns to the prompt. The status bar at the bottom shows "未连接.", "xterm", "92x30", "28,9", "1 会话", and "CAP NUM".
